OBJECTIVE

Computer Science graduate with hands-on experience building and automating CI/CD pipelines using Docker, Jenkins, Terraform, and Ansible on AWS. Strong foundation in Linux, scripting, and infrastructure as code, with a builder's mindset for creating reliable, automated, and scalable deployment workflows. Currently deepening DevOps expertise through a dedicated DevOps certification program.

EDUCATION

St Thomas College of Engineering & Technology, Chengannur <i>B.Tech in Computer Science & Engineering; CGPA: 7.13</i>	2022 – 2026
Govt HSS, Punalur <i>Higher Secondary; 84.75%</i>	2022
St. Stephens HS, Punalur <i>SSLC; 93%</i>	2020

TECHNICAL SKILLS

DevOps & Cloud: Docker, Jenkins, GitHub Actions, Kubernetes, Argo CD, SonarQube, Terraform, Ansible, AWS (EC2), Nginx, Maven
Languages: Python, C, C#, JavaScript, Bash, HTML/CSS
Platforms & Tools: Linux, Git & GitHub, Docker Hub, GHCR, .NET Core, Flutter, MySQL
Concepts: CI/CD, GitOps, Infrastructure as Code, Containerization, Configuration Management

PROJECTS

- Java Spring Boot CI/CD Pipeline** | *Jenkins, SonarQube, Docker, Kubernetes, Argo CD, Maven*
- Built a Jenkins declarative pipeline: checkout → Maven build/test → SonarQube static analysis → Docker build → Docker Hub push → GitOps manifest update
 - Automated Kubernetes deployment manifest updates with versioned Docker images and [skip ci] commit messages
 - Deployed 2-replica Kubernetes deployment with NodePort service on port 8080
 - Configured Argo CD for GitOps-based continuous delivery syncing from GitHub manifests
- Automated Cloud Deployment** | *AWS EC2, Terraform, Ansible, Docker, Jenkins, Nginx, Bash*
- Dockerized a static web application using Nginx Alpine; provisioned AWS EC2 with Terraform
 - Automated server configuration and app deployment using Ansible playbooks
 - Built Jenkins CI/CD pipeline: build → test → push to Docker Hub → deploy with image versioning via build numbers
 - Integrated GitHub webhooks for fully automated pipeline triggering on code changes
- Wisecow Kubernetes CI/CD & Monitoring** | *Kubernetes, Docker, GitHub Actions, GHCR, NGINX Ingress, TLS*
- Containerized a Bash web application and deployed on Kubernetes with 2 replicas and NodePort service
 - Implemented GitHub Actions CI/CD: build → push to GHCR → deploy to Kind cluster with rollout restart
 - Configured NGINX Ingress with TLS/HTTPS for secure external access
 - Developed Python HTTP health-check utility and Bash system monitor (CPU, memory, disk, processes with 80% threshold alerting)
- NovaMotion — Smart Wheelchair** | *Flutter, Python, ESP32, IoT Sensors*
- Built a multimodal smart wheelchair controlled via eye-gaze tracking, joystick, and voice commands
 - Implemented fall detection and ultrasonic obstacle avoidance for safety
 - Developed Flutter caretaker app with live GPS, vitals monitoring, and emergency alerts

EXPERIENCE / TRAINING

DevOps Training <i>Zoople Technologies</i>	Ongoing 6 Months
.NET Internship <i>Nest Academy</i>	1 Month

CERTIFICATIONS

Linux Unhatched | Cisco

LEADERSHIP

Chairperson, College Union <i>St Thomas College of Engineering & Technology</i>	3 months
Chairperson, IEEE Student Branch <i>STCET</i>	2 Years
Operations Lead, IEDC (Innovation & Entrepreneurship Development Cell)	1 Year
